## ozone

---

Ozone, also known as energetic oxygen, uses natural UV light as a powerful oxidizer to eliminate impurities from the water. Ozone cleanses the water naturally, even oxidizing: soaps, deodorant, hair spray, cologne, makeup, perfume, body lotion and other various chemicals. Ozone is installed to the plumbing system through a clear air line from the ozone control box. The flow from the pump forms suction, drawing the Ozone into the water where it dissolves and cleans your water without the need for chemical usage. The Ozone accessory is available only on Whirlpool and Airbath systems.

### **ozone system (110 volt)**

Part #: OZONE List Price: \$495
