## **INSTALLATION INSTRUCTIONS**

### **Tools Needed**

Basin Wrench • Adjustable Wrench • Slip Joint Pliers • Teflon Pipe Tape • Screwdriver  
Hex Wrench

### **Installation Instructions**

1. Turn off the water supply.
2. Connect supply hoses to faucet.
3. Push base escutcheon onto lower faucet body.
4. Position the faucet and push the hoses through the hole in the floor.
5. Connect the water supply to the the braided hoses.
6. Secure the spout to the body of the faucet.
7. Turn on water to test connections for leaks.
8. If no leaks are found secure the faucet to the floor by screwing down the fixing ring with the screws provided.
9. Remove aerator and turn on water to remove debris from lines.
10. Replace aerator in faucet.

### **Cleaning Instructions**

Wipe this whole set off with warm water and a soft cloth. DO NOT use soaps, cleansers, or brass cleaners as they will disintegrate the protective lacquer coating and leave the brass exposed causing it to tarnish.
