

SINK CARE

POLISHED WHITE BRONZE

Polished White Bronze is a metal, cast the same color throughout and then buffed to a highly polished finish. It has the appearance of polished nickel, but is not plated.

Gentle soap and water will maintain the sink.
A mild metal polish can be used to remove any tarnish.

No abrasives or harsh chemicals should be used.

Polished White Bronze sinks have a highly polished finish.
Care must be taken to not scratch the finish.

A clear paste wax can be applied in order to slow down the darkening of the sink.
